Attachment J

Quality of Life

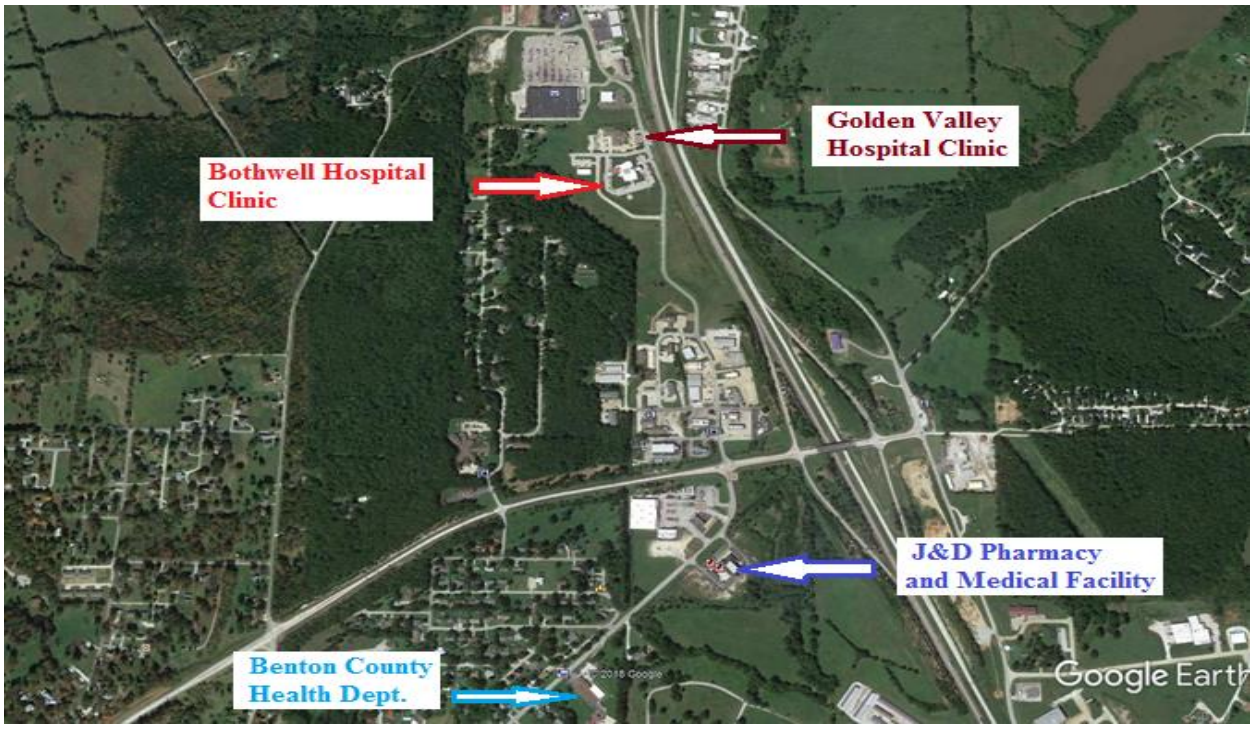
Scroll down to see pictorial examples of how our deteriorating infrastructure can be rebuilt to provide significant quality of life improvements. The same vision and theme will be carried through in the design of the "complete streets" improvements. This will create an inviting experience as vehicles enter or exit the community.

More important, we will create improved access for our citizens to critical facilities, job centers, and our award winning waterfront in Drake Harbor.

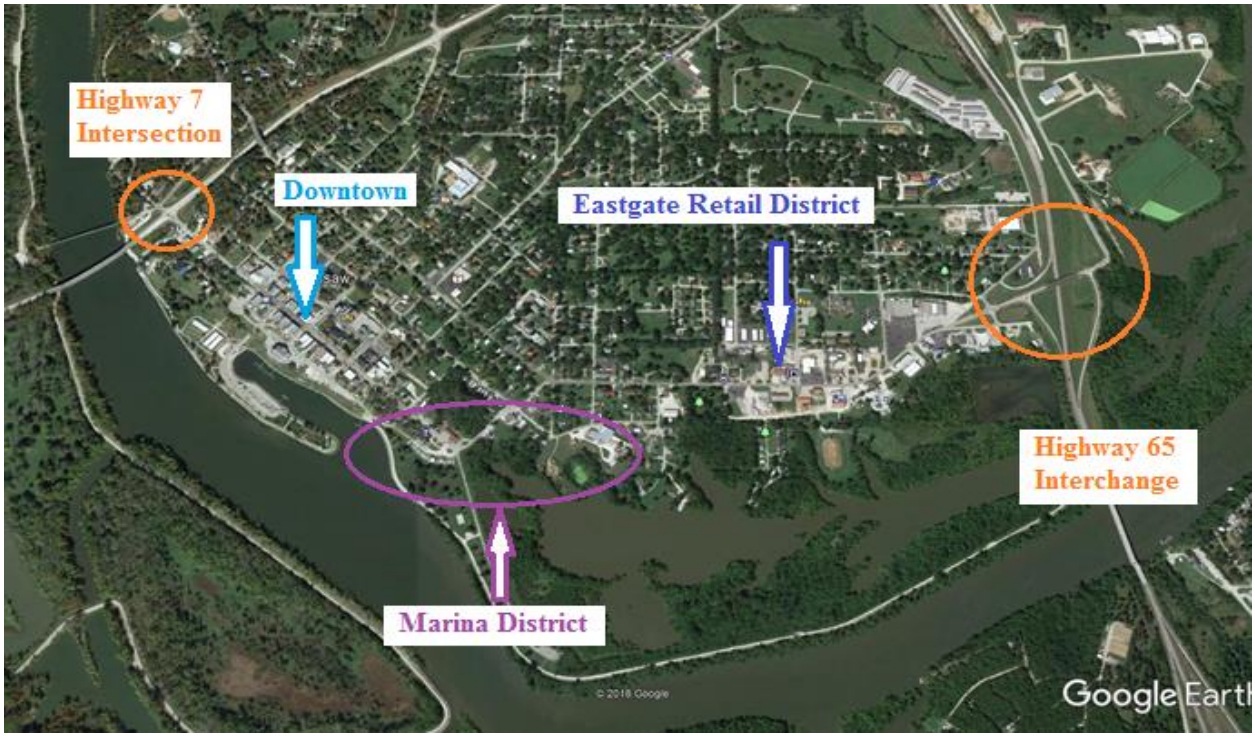
Go to our website to view the remaining attachments showing the quality of life investments we have made to date through our Main Street Revitalization project:
http://welcometowarsaw.calevir.com/523/warsaw-build-2019/

J.1 Main Street Revitalization – Infrastructure
J.2 Main Street Revitalization – Facades
J.3 Main Street Revitalization – Drake Harbor Recreation Area

The following pictures show how the proposed improvements connect to these key facilities in our community. Commercial Street is the main route for our rural health care network. Each one of these facilities are located within a commercial district. Second map illustrates how Commercial is critical to our connection to major retail districts and recreation facilities.



Main Street intersects Highway 7 and 65 through our major waterfront commercial districts.



Below: Jackson Street is a critical route to our main city park with the city pool. Jackson also has a connection to our trail network. The roadway continues north to the Access Road and future residential development.

Benton Street is the main access into Drake Harbor Recreation Area from Main Street. The aerial photo was taken before the Harrison Street project was completed. Benton from Harrison into the Harbor is complete. Only section remaining to complete is between Harrison and Main.

Jackson and Commercial are critical routes to the North School and the surrounding residential areas.
